

- 1) (Currently amended) A method for providing instruction
~~instructional information~~ on the use of a medical device to
a user computer, the method comprising:
 - a) receiving a request for instruction ~~instructional~~
~~information~~ on the use of the medical device over a
network, the request originating from the user computer;
 - b) providing a first graphical user interface having a list
of instructional topics associated with the medical
device to the user computer in response to the request;
 - c) providing a second graphical user interface having a list
of instructional sub-topics associated with an item on
the list of instructional topics to the user computer in
response to receiving a request for the item on the list
of instructional topics from the user computer;
 - d) providing a plurality of instructional graphical user
interfaces having ~~instructional information~~ instructions
pertaining to an item on the list of instructional sub-
topics to the user computer in response to receiving a
request for the item on the list of the instructional
sub-topics from the user computer, at least one of the
first, second and plurality of instructional graphical
user interfaces including at least one interactive
simulation object with which interaction simulates
operating controls or device instruments of the medical
device; and
 - e) generating a feedback in response to interacting with the
interactive simulation object indicating (i) whether a
particular interaction is appropriate under given
conditions; and (ii) the correctness on the use of the
medical device.
- 2) (Original) The method according to claim 1, wherein the
medical device is an Automatic External Defibrillator
(AED).
- 3) (Original) The method according to claim 1, wherein the
list of instructional topics include at least a utility of
the medical device item, an operation of the medical device
item, a device troubleshooting item and a device
maintenance item.

- 4) (Original) The method according to claim 1, further comprising:
 - a) providing an audio in at least one of the graphical user interfaces.
- 5) (Original) The method according to claim 1, further comprising:
 - a) providing linear and non-linear navigation from at least one of the graphical user interfaces to another of the graphical user interfaces.
- 6) (Original) The method according to claim 1, wherein the instructional information in each of the plurality of instructional graphical user interface includes a text description of one or more operational steps pertaining to the selected item on the list of instructional sub-topics.
- 7) (Original) The method according to claim 6, further comprising:
 - a) providing in one or more of the plurality of instructional graphical user interfaces one or more still images illustrating the text description of the one or more operational steps.
- 8) (Original) The method according to claim 6, further comprising:
 - a) providing in one or more of the plurality of instructional graphical user interfaces an interactive animation illustrating the text description of the one or more operational steps.
- 9) (Original) The method according to claim 6, further comprising:
 - a) providing in one or more of the plurality of instructional graphical user interfaces a video illustrating the text description.
- 10) (Original) The method according to claim 6, wherein each of the plurality of instructional graphical user interfaces is provided based on the order in which the one or more

operational steps in the text description would be performed during the proper operation of the device.

- 11) (Original) The method according to claim 10, wherein the medical device is an Automatic External Defibrillator (AED).
- 12) (Original) The method according to claim 10, further comprising:
 - a) providing in one or more of the plurality of instructional graphical user interfaces an interactive animation illustrating the text description of the one or more operational steps.
- 13) (Original) The method according to claim 12, wherein user interaction is required for the animation illustrating the text description of the one or more operational steps.
- 14) (Currently amended) A system for providing instruction ~~instructional information~~ on the use of a medical device, the system comprising:
 - a) a network;
 - b) a user computer coupled to the network for requesting instructional information on the use of the medical device; and
 - c) a server coupled to the network;
wherein the server provides a first graphical user interface having a list of instructional topics associated with the medical device to the user computer in response to the request for instruction, provides a second graphical user interface having a list of instructional sub-topics associated with an item on the list of instructional topics to the user computer in response to receiving a request for the item on the list of instructional topics from the user computer, provides a plurality of instructional graphical user interfaces having instructional information pertaining to an item on the list of instructional sub-topics to the user computer in response to receiving a request for the item on the list of the instructional sub-topics from the user computer, at least one of the first, second, and plurality of instructional graphical user interfaces

including at least one interactive simulation object with which interaction simulates operating controls or device instruments of the medical devices, and generates a feedback in response to interacting with the interactive simulation object indicating (i) whether a particular interaction is appropriate under given conditions; and (ii) the correctness on the use of the medical device.

- 15) (Original) The system according to claim 14, wherein the medical device is an Automatic External Defibrillator (AED).
- 16) (Original) The system according to claim 14, wherein the network is the Internet or an Intranet.
- 17) (Original) The system according to claim 14, wherein the list of instructional topics include at least a utility of the medical device item, an operation of the medical device item, a device troubleshooting item and device maintenance item.
- 18) (Original) The system according to claim 14, further comprising:
 - a) an audio object provided in at least one of the graphical user interfaces permitting the user to listen to an audio.
- 19) (Original) The system according to claim 14, further comprising:
 - a) a linear navigation object and a non-linear navigation object provided in at least one of the graphical user interfaces permitting the user to navigate from the at least one of the graphical user interface displays to another of the graphical user interfaces.
- 20) (Original) The system according to claim 14, wherein the instructional information includes a text description of one or more operational steps pertaining to the selected item on the list of instructional sub-topics.

- 21) (Original) The system according to claim 20, further comprising:
- a) at least one still image object provided in each of the plurality of instructional graphical user interfaces for illustrating the text description of the one or more operational steps.
- 22) (Original) The system according to claim 20, further comprising:
- a) an interactive animation object provided in the at least one instructional graphical user interfaces for illustrating the text description of the one or more operational steps.
- 23) (Original) The system according to claim 20, further comprising:
- a) a video object provided in at least one of the plurality of instructional graphical user interfaces for illustrating the text description of the at least one instructional graphical display.
- 24) (Original) The system according to claim 20, wherein each of the plurality of instructional graphical user interfaces is provided based on the order in which the one or more operational steps in the text description would be performed during the proper operation of the device.
- 25) (Original) The system according to claim 24, wherein the medical device is an Automatic External Defibrillator (AED).
- 26) -37) (Cancelled)
- 38) (Currently amended) A method for providing instruction ~~instructional information~~ on the use of a medical device to a user computer, the method comprising:
- a) providing a medical device control object in a first graphical user interface, the medical device control object simulating a control of the medical device;
 - b) providing a medical device first aid instrument object in the first graphical user interface or a second graphical

- user interface, the medical device first aid object, simulating a first aid component of the medical device;
- g) allowing a trainee to interact with the medical device control object and medical device first aid instrument object by manipulation of the displayed medical device control object and medical device first aid instrument object in the first or second graphical user interface;
and
- c) providing feedback in response to interacting with the medical device control object and medical device first aid instrument object, the feedback indicating the correctness of the interaction with the medical device control object and the medical device first aid instrument object.
- 39) (Original) The method according to claim 38, wherein the medical device is an Automatic External Defibrillator (AED).
- 40) (Original) The method according to claim 38, further comprising:
- d) providing an audio, the audio disclosing instructional information related to the medical device.
- 41) (Previously presented) The method according to claim 38, further comprising:
- e) providing text description of one or more operational steps pertaining to the medical device.
- 42) (Previously presented) The method according to claim 41, further comprising:
- f) providing one or more still images illustrating the concept disclosed by the text description of the one or more operational steps.
- 43) (Previously presented) The method according to claim 41, further comprising:
- providing a video illustrating the concept disclosed by the text description of the one or more operational steps.

44) (Previously presented) The method according to claim 1 wherein the interactive simulation object comprises a medical device control object.

45) (Previously presented) The method according to claim 1 wherein the interactive simulation object comprises a medical device first aid instrument object.

46) (Previously presented) The method according to claim 14 wherein the interactive simulation object comprises a medical device control object.

47) (Previously presented) The method according to claim 14 wherein the interactive simulation object comprises a medical device first aid instrument object.

48) (Canceled)

49) (Canceled)
